                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                other organisms, for determining bCOD levels in humans (to identify subjects requiring vitamin A supplementation) and for detecting mutations in the bCOD wene. The nucleotide encoding bCOD may also be used to transform cells, particularly plant cells, to increase their vitamin A contents (especially in fruits and vegetables) and in gene therapy of subjects who have mutated or deleted forms of the bCOD gene and thus low vitamin A levels and susceptibility to developmental or ophthalmological disorders. Antibodies raised against bCOD are used for detection/Apantification of bCOD in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Reta, beta-carotene-15,15'-dioxygenase (bCOD) is used for enzymatic conversion of beta-carotene to vitamin A and for raising specific antibodies. Nucleotides encoding all or part of bCOD are useful as primers or probes for specific amplification and/or detection of the gene that encodes bCOD, for isolation of related sequences in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Beta,beta-carotene 15,15'-dioxygenase protein, nucleic acids antibodies, useful for production of vitamin A from carotene therapy of opthalmological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 3111 BP; 1005 A; 620 C; 622 G; 864 T; 0 other,

Dt. .

the present invention describes primer sets for synthesising 5002 full-length cDNAs defined in the specification. Where a primer set remprises (a) an object further and an objective mappinentary to the complementary strand of a polynucleotide which comprises one of the 5002 machenish sequences defined in the specification, where the obligonucleotide comprises at least 15 nucleotides or (b) a combination of 30 obligonation of the comprises at least 15 nucleotides or (b) a combination of 30 obligonation of a polynucleotide which comprises a 5 cend sequence and an obligonation of a polynucleotide which comprises a 5 cend sequence and an obligonation of the complication of a polynucleotide which comprises a 5 cend

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              γ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches 1111;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence is selected from those defined in the 5'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH18742 represent human amino acid sequences; and AAH13629 to AAH13629 to AAH13629, all of which are used in the exemplification of the present oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2427 BP; 678 A; 578 C; 591 G; 580 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the present invention.

Beta-diox specifically cleaves beta-carolene to form vitamin A aldehyde. Beta-diox is is useful for producing transgenic plants. The transgenic plants have improved morritional quality or physiological condition and accumulate vitamin A aldehyde and can take up beta-carotene from the medium. Expression systems encoding beta-diox activity. Identification of cDNAs encoding beta-diox allows the physiological characterization of cDNAs encoding beta-diox allows the physiological characterization of mammalian vitamin A metabolism. Vitamin A production in crops and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ξ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 글
                                                                                                                                     complementary straind of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detertion and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH03166 to AAH13628 and AAH13633 represent human cDNA sequences; AAB92446 to AAH13639 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the 5602 nucleotide sequences defined in the specification, where the oliqonucleotide comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes primer sets for synthesising 5602 full length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDMAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                      represent oligonariestides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of an oligonucleotide comprising a sequence complementary to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             to the complementary strand of a polynucleotide which comprises one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; SEQ 1D 3313; 2537pp + CD ROM; English

                                                                                                                                                                                                                                                                                                                             detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods, AAH3316 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences, AAB92446 to AAH95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligo-nucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                          Sequence 1983 BP; 583 A; 384 C; 493 G; 523 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the specification. The primer sets can be used in antisense therapy and in gone therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Primer sets for synthesizing polynucleofides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosts of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                          of the present invention.

a cell or tissue which can modify the level of vitamin A and other retinoids. Antibodies are useful for studying beta-diex I: localisation, screening of an expression library to identify nucleic acids encoding beta-diex II or the structure of functional domains. The transgenic fungi, yeast, insect, animal or plant cells, seeds, tissues, or whole organisms have improved nutritional quality or physiological condition and accumulate important metabolites of carotene/retinoid pathways such as vitamin A aldehyde and retinoic acid, ceta-carotene or take up beta-carotene from the medium Expression systems encoding beta-diex II are
                                                                                                             useful in the study of beta-diox II activity. Identification of cDNAs encoding beta-diox I and II allows the physiological characterisation of mammalian carotene/retinoid metabolism. Vitamin A production in crops and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          determining the presence of quantity of beta-diox II morbels acid and determining presence and amount of beta-diox II. The polypeptide is a useful for increasing or decreasing the amount of beta-diox II levels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               useful as probes and as a guideline to define new PCR (polymerase chain reaction) primers for the cloning of substantially homologous DNA segmences from other sources. The north-reacids are also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                endogenous beta-diox II. The beta-diox II specific antisense oligonuclectides derived from the DNA sequence are useful for dose response studies in relevant models of retinoid/vitamin A deficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence represents the coding sequence of human-2, beta-carotene dioxygenase (Beta-diox II). Beta-diox specifically cleaves beta-carotene and lycopene to form beta-apocarotenal and beta-innone, and

The gene is useful for identifying dogs which are genetically normal, or are carriers of, or affected with congenital stationary night blindness (CSNB). Carriers for CSNB are identified through the detection of an AAGA deletion at nucleotides 487.490 in the canine RPE65 gene. This allows a breader to eliminate the carrier from the breeding stock or to breed carriers with recetically formal loss.

The sequence represents the coding sequence of wase 2, beta carotene dioxygenase (Retardiox II). Reta diox specifically cleaves beta carotene and lycopene to form beta appearance and beta income, and applyopenals, respectively. The DNA is useful for transforming grain seeds, e.g. corn, oil seeds, e.g. Riasira seeds; edible seeds of palm, edible seeds of seeds with edible parts e.g. chick peas; potatoes, carrots, seet potatoes, sugar beets, benana. The polypeptide is useful for diagnostic and/or therapeutic purposes and for preparing antisonse or ribozyme type therapeutic agents and for detecting any abnormality of

palm;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and accumulate important metabolites of carotene/retinoid pathways such as vitamin A aldehyde and retinoic acid, beta-carotene or take up beta-carotene from the medium Expression systems envoling beta-diox II are useful in the study of beta-diox II activity. Identification of cDNAs encoding beta-diox I and II allows the physiological characterisation of mammalian carotene/retinoid metabolism. Vitamin A production in crops and microorganisms can be achieved by transforming the organisms or crops
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       determining presence and amount of beta-diox II. The polypeptide is also useful for increasing or decreasing the amount of beta-diox II levels in a cell or tissue which can modify the level of vitamin A and other retinoids. Antibodies are useful for studying beta-diox II localisation, screening of an expression library to identify nucleic acids encoding beta-diox II or the structure of functional domains. The transgenic lungi, yeast, insect, animal or plant cells, seeds, tissues, or whole organisms have improved nutritional quality or physiological condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   response studies in relevant models of retinoid/vitamin A deficiency during any stage of an organism's development. The nucleic acids are also useful as probes and as a guideline to define new PCR (polymerase chain reaction) primers for the cloning of substantially homologous DNA sequences from other sources. The nucleic acids are also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1855 BP; 502 A; 404 C; 482 G; 467 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            determining the presence or quantity of beta-diox II nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              with the cDNAs

DNA encoding zebra-2, beta-carotene dioxygenase (Beta-diox II).

WWXEXEXXXX lycopene; beta-apocarotenal; Beta carotone dioxygenase; beta diox I; mebra 2; keta-carotene; beta-ionone; apolycopenal; seed; corn;

```
CC endogenous beta-diox II. The beta-diox II specific antisense colligonucleotides derived from the DNA sequence are useful for dose colligonucleotides in relevant models of rethinoid/vitamin A deficiency cduring any stage of an organism's development. The nucleic acids are also useful as probes and as a quideline to define new PCR (polymerase chain CC reaction) primers for the cloning of substantially homologous DNA CC sequences from other sources. The nucleic acids are also useful for concession of a mount of beta-diox II nucleic acid and CC determining the presence or quantity of beta-diox II nucleic acid and CC useful for increasing or decreasing the amount of beta-diox II levels in CC a cell or tissue which can modify the level of vitamin A and other CC retinoids. Antibodies are useful for studying beta-diox II localisation, CC screening of an expression library to identify nucleic acids encoding beta-diox II or the structure of functional domains. The transgenic CC fungi, yeast, insect, animal or plant cells, seeds, issues, or whole corganisms have improved nutritional quality or physiological condition can vitamin A aldehyde and retinoic acid, beta carotene or take up beta-CC as vitamin A aldehyde and retinoic acid, beta carotene or take up beta-CC useful in the study of beta-diox II activity. Identification of constant of constant of constant and carotene/rethnoid metabolism. Vitamin A production in crops and confirmation carotene/rethnoid metabolism. Vitamin A production in crops and confirmation and constant of section and carotene/rethnoid metabolism.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence represents the coding sequence of zebra-2, beta-carotene dioxygenase (Beta-diox II). Beta-diox specifically cleaves beta-carotene and lycopene to form beta-apocarotenal and beta-ionone, and apolycopenals, respectively. The DNA is useful for transforming grain seeds, e.g. corn; oil seeds, e.g. Brassica seeds, edible seeds e.g. palm, edible seeds or seeds with edible parts e.g. chick-pass; potatoes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           oil seed, palm, chick pea, diagnostic, therapeutic; ribozyme; zebrafish; retinoid/vitamin A deficiency; bera-drox II- transgence; nutrition; carotene/retinoid pathway; vitamin A aldehyde; retinoic acid; crop; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            carrots, sweet potatoes, sugar beets, banana. The polypeptide is useful for diagnostic and/or therapeutle purposes and for preparing antisense ribozyme type therapeutic agents and for detecting any abnormality of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 8; Page 106-109; 116pp; English

XX

Pho present invention describes primer sets for synthesising 5602

CC full-length cDNAs defined in the specification. Where a primer set or comprises: (a) an eligo-dT primer and an eligo-dT primer and an eligo-dT primer set of the complementary strand of a polynuclectide which comprises one of the 5602 nuclectide sequences defined in the specification, where the coligonuclectide comprises at least 15 nucleotides; or (b) a combination of an eligonucleotide which comprises a 5'-end complementary strand of a polynucleotide which comprises a 5'-end complementary strand of a polynucleotide which comprises a 5'-end complementary and individual electide comprises a 3'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in gene therapy. The primers sets can be used in antisense therapy and complementary full-length cDNAs. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the complementary in the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length day specialised methods AAH3465 to AAH3482 and AAH3482 conditions and AAH3467 to AAH3482 conditions.

upolycopenals, respectively. The DNA is useful for transforming grain seeds, e.g. corn; oil seeds, e.g. Brassica seeds; edible seeds e.g. palm; edible seeds or seeds with edible parts e.g. chick-peas; potatoes, carrots, sweet potatoes, sugar beets, banana. The polypeptide is useful for diagnostic and/or therapeutic purposes and for preparing antisense or ribozyme type therapeutic agents and for detecting any abnormality of endogenous beta-diox II. The beta-diox II specific antisense oligonucleotides derived from the DNA sequence are useful for dose response studies in relevant models of rethnoid/vitamin A deficiency during any stage of an organism's development. The nucleic acids are also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     organisms have improved nutritional quality or physiological condition and accumulate important metabolites of cartoteme/fethnoid pathways such as vitamin A aldebyde and retinoic acid, beta-carotene or take up beta-carotene from the medium. Expression systems encoding beta-diox II are useful in the study of beta-diox II activity. Identification of cDNAs encoding beta-diox I and II allows the physiological characterisation of mammalian carotene/retinoid metabolism. Vitamin A production in crops and microorganisms can be achieved by transforming the organisms or crops
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  determining presence and amount of beta-diox II. The polypeptide is also useful for increasing or decreasing the amount of beta-diox II levels in a cell or tissue which can modify the level of vitamin A and other retinoids. Antibodies are useful for studying beta-diox II localisation, screening of an expression library to identify nucleic acids encoding beta-diox II or the structure of functional domains. The transgenic fundi, yeast, insect, animal or plant cells, seeds, lissues, or whole
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          useful as probes and as a guideline to define new PCF (polymerase chain reaction) primers for the cloning of substantially homologous DNA sequences from other sources. The nucleic acids are also useful for determining the presence or quantity of beta-diox II nucleic acid and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2037 BF, 492 A; 521 C, 531 G, 493 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Heta, beta-carotene-15,15'-dioxygenase (bCOD) is used for enzymatic conversion of beta-carotene to vitamin A and for raising specific antibodies. Nucleotides encoding all or part of bCDD are useful as primers or probes for specific amplification and/or detection of the gene that encodes bCOD, for isolation of related sequences in other organisms, for determining bCDD levels in humans (to identify
                                                                AAY97314 standard; Protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       subjects requiring vitamin A supplementation) and for detecting mutations in the bCOD gene. The nucleatide enougher bCOD may also be used to transform cells, particularly plant cells, to increase their vitamin A contents (especially in truits and vegetables) and in gene therapy of subjects who have mutated or deleted forms of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Heta, beta-carotene 15,15′-dioxygenase protein, nucleic acids and antibodies, useful for production of vitamin A from carotene and

subjects requiring vitamin A supplementation) and for detecting mutations in the bCOD gene. The nucleotide encoding bCOD may also be used to transform cells, particularly plant cells, to increase their vitamin A contents (especially in truits and veopriables) and in gene therapy of subjects who have mutated at detect from bCOD gene and thus low vitamin A levels and susceptibility to developmental or obthalmological discoders. Antibodies raised against bCOD are used for detection/quantification of bCOD in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Beta, beta-carotene-15,15'-dioxygenase (bCOD) is used for enzymatic conversion of beta-carotene to vitamin A and for raising specific antibodies. Nucleotides encoding all or part of bCOD are useful as primers or probes for specific amplification and/or detection of the gene that encodes bCOD, for isolation of related sequences in other organisms, for determining bCOD levels in humans (to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Beta,beta-carotene 15.15^{\prime}\cdot dioxygenase protein, nucleic acids antibodies, useful for production of vitamin A from carotene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ophthalmological disorder; antibody; detection; quantification;

of an oligonuclective comprising a sequence complementary to the complementary straid of a polynucleotide which comprises a 5'-end sequence and an aligonucle-didevice comprises a 3'-end sequence, where the oligonucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the defenction and/or blaguesis of the abnormality of the primits encount the full-length cDNAs. The primers are also useful for the
                                                                                                                                                                                                           The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynoclasside which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of specification comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                                                                                                                                                                       Primer sets for synthesizing polynucleorides, particularly the 5502 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       11-JAN-2000; 2000JP-0118776

Expression systems encoding beta-diox are useful in the study of beta-diox activity. Identification of conas encoding bota-diox allows the physiological characterization of mammalian vitamin A metabolism. Vitamin A production in crops and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    plants The transpenic plants have improved nutritional quality or physical equalition and accumulate vitamin A aldehyde and can take
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a beta-carotene dioxygenase (beta-diox) polypeptide. Beta-diox specifically cleaves beta-carotene to form vitamin A aldehyde. Beta-diox is is useful for producing transgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           microorganisms can be achieved by transforming the organisms or crops
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 7; Page 86-87; 87pp; English.

organisms have improved nutritional quality of physiological condition and accomplate important melabolites of cardenoted involviment pathways such as vitamin A alcohyde and retirols acid, bota-cardeno it ake up hota cardeno from the medium. Expression systems encoding bota-diox II are useful in the study of beta-diox II accivity. Identification of clNAs encoding bora-diox I and II allows the physiological characteristation of mammalian carotene/retiroid metabolism. Vitamin A production in crops and
                                                                                                                                                                                                                                                      determining the presence or quantity of beta-diox II nucleic acid and determining presence and amount of beta-diox II. The polypoptide is also useful for increasing or decreasing the amount of beta-diox II levels in a cell or tissue which can modify the level of vitamin A and other a cell or tissue which can modify the level of vitamin A and other retinoids. Antibodies are useful for studying beta-diox II localisation, screening of an expression library to identify nucleic acids encoding beta-diox II or the structure of functional domains. The transquaic
                                                                                                                                                                                                                                                                                                                                                                                                                                   response studies in relevant models of retinoid/vitamin A delicioncy during any stage of an organism's development. The nucleic acids are also useful as probes and as a quideline to define new PCR (polymerase chain reaction) primers for the cloning of substantially homologous DNA sequences from other sources. The nucleic acids are also useful for sequences from other sources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              edible seeds or seeds with edible parts e.g. chick peas; potators, carrots, sweet potatoes, sugar beets, banana. The polypeptide is useful for diagnostic and/or therapeutic purposes and for preparing antisense or ribozyme type therapeutic agents and for detecting any absorbability of endogenous beta-diox II. The beta-diox II specific antisense of oligonucleotides derived from the DNA sequence are useful for descentions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          apolycopenals, respectively. The DNA is useful for transforming grain seeds, e.g. corn; oil seeds, e.g. Brassica seeds, edible seeds e.g. palm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence represents the amino acid sequence of zebra 2, beta-carotene dioxygenase (Beta-diox II). Beta-diox specifically cleaves beta-carotene and lycopene to form beta-apocarotenal and beta-lonone, and
                        microorganisms can be achieved by transforming the organisms or crops
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           lycopene; beta-apodarotenal; beta-ionome; apolycopenal; grain seed; cornoll seed; palm, chick-pea, diagnostic, therapeutic, ribozyme, schrafish; retinoid/vitamin A deficiency; beta-diox II; transgenic; nuturition; carotene/retinoid pathway; vitamin A aldebyde; retinoic acid; crop.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3' end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 6' end sequence/3' end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the 5602 nucleatide sequences defined in the specification, where the oligonucleatide comprises at least Is nucleatides; or (b) a combination of an oligonucleatide comprising a sequence complementary to the complementary strand of a polynucleatide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynoclectide which comprises and of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   crWAs easily without any specialised methods. AAH08166 to AAH18628 and AAH18633 to AAH18742 represent human cuNA sequences; AAB92446 to AAH18632 AAB96893 represent human amino acid sequences; and AAH13629 to AAH13632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. fungi, yeast, insert, animal or plant cells, seeds, rissues, or whole organisms have improved nutritional quality or physiological condition and accountable improved nutritional quality or physiological condition and accountable improved nutritional quality or physiological condition and accountable insputant metabolities of carotene or take up beta-carotene from the medium. Expression systems encoding beta-diox II are useful in the study of beta-diox II activity. Identification of cPNAs encoding beta-diox I and II allows the physiological characterisation of mammalian carotene/retinoid metabolism. Vitamin A production in crops and
                                                                                                                                                                                                                                                              determining the presence or quantity of beta diox II nucleic acid and determining presence and amount of beta diox II. The polypoptide is also useful for increasing on decreasing the amount of beta diox II levels in a cell or tissue which can modify the level of vitamin A and other retinoids. Antibodies are useful for studying beta-diox II localisation,
                                                                                                                                                                                                                                                                                                                                                                                          response studies in relevant models of retiroid/oftamic A deticionary during any stage of an organism's development. The models acids are also useful as probes and as a guideling to define now MCP (polymerase chain reaction) primers for the cloning of substantially homologous DNA sequences from other sources. The nucleic acids are also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for diagnostic and/or therapeutic purposes and for preparing antisense ribodyme type therapeutic agents and for detecting any abnormality of endogenous beta-diox II. The beta-diox II specific antisense cliponacleutides derived from the ENA sequence are useful for doso
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           apolycopenals, respectively. The DNA is useful for transforming grain seeds, c.g. corn; oll seeds, e.g. brassica seeds; edible seeds e.g. palm; bill-b seeds or seeds with ball-b parts - g whick pass potatoes, carrots, sweet potatoes, sugar boots, banana. The polypoptide is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence represents the amino acid sequence of Luman 2, hala carotemedioxygenase (Beta diox II). Beta diox specifically cleaves beta caroteme and lycopene to from beta caroteme and lycopene to from beta caroteme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated mouse, human, zebrafish beta-carotene dioxygenase (beta-diox II) protein that cleaves beta carotene and lycopene to yield beta-apocarotenal and beta-ionone, and apolycopenals, respectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           lycopene; beta apocarotenal; beta ionone; apolycopenal; grain seed; corn; oil seed; palm; chick-pea; diagnostic; therapeutic; ribozyme; rethoold/witamin A deficiency; beta-diox II; transgenic; nutrition; carcteme/retinoid pathway; witamin A aldohyde; retinoic acid; crop.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAUv4294 standard; Protein; 556 AA
                                                                                                                                                                                                                screening of an expression library to identify modele solds encoding beta-diex II or the structure of functional domains. The gene encoding this protein is useful for identifying dogs which are genetically normal, or are carriers of, or affected with congenital stationary night blindness (CSNB). Carriers for CSNB are identified through the detection of an AAGA deletion at macheolides 487-490 in the canine RPE65 gene. This allows a breeder to eliminate the carrier from the breeding stock or to breed carriers with genetically normal dogs.

                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and cell-cell interactions in higher eukaryotes for the development of inserticides, therapeutics and pharmaceutical drugs. The invention discluses genomic DNA sequences (ABL16176-ABL30511), expressed DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and accumulate important metabolites of caroteme/tetinoid pathways such as vitamin A aldehyde and retinoic acid, beta-carotene or take up beta-carotene from the medium. Expression systems encoding beta-diox II are useful in the study of beta-diox II activity. Identification of cDNAs encoding beta-diox II allows the physiological characterisation of mammalian carotene/tetinoid metabolism. Vitamin A production in crops and microorganisms can be achieved by transforming the organisms or crops
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   determining the presence of quantity of beta diox II nucleic acid and determining presence and amount of beta-diox II. The polypeptide is also useful for increasing or decreasing the amount of beta-diox II levels in a cell or tissue which can modify the level of vitamin A and other retinoids. Antibodies are useful for studying beta-diox II localisation, screening of an expression library to identify nucleic acids encoding beta-diox II or the structure of functional domains. The transgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      carrots, sweet potatoes, sugar beets, banana. The polypeptide is useful for diagnostic and/or therapeutic purposes and for preparing antisense or ribozyme type therapeutic agents and for detecting any abnormality of endogenous beta-diox II. The beta-diox II specific antisense oligonucleotides derived from the DNA sequence are useful for dose response studies in relevant models of retinoid vitamin A deficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              during any stage of an organism's development. The nucleic acids are als useful as probes and as a guideline to define new PCR (polymerase chain reaction) primers for the cloning of substantially homologous DNA sequences from other sources. The nucleic acids are also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   fungi, yeast, insect, animal or plant cells, seeds, tissues, or whole organisms have improved nutritional quality or physiological condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seeds, e.g. corn; oil seeds, e.g. Brassica seeds; edible seeds e.g. palm edible seeds or seeds with edible parts e.g. chick-peas; potatoes,
